

## Wet Tantalum Capacitor, Button Assembly or Array, All-Tantalum Case, - 55 °C to 125 °C Operation

### FEATURES

- All-Tantalum electrodes eliminate silver migration
- Withstands high ripple current
- Long life reliability
- Reverse voltage capability
- Stackable

### PERFORMANCE CHARACTERISTICS

**Operating Temperature:** - 55 °C to + 125 °C

**Voltage Range:** 6 V<sub>DC</sub> to 125 V<sub>DC</sub>

**Capacitance Range:** 235 µF to 9100 µF

### SPECIFICATIONS

**Environmental Classification:** 55/125/56

**Vibration:** 10 Hz to 2000 Hz, 0.75 mm or 99 m/s<sup>2</sup>, 30 h

**Bump:** 320 m/s<sup>2</sup>, 4000 bumps

**Shock:** -

**Acceleration:** -

**Low Air Pressure:** 1 kPa

### REVERSE VOLTAGE CAPABILITY

Module units are polar capacitors which allow the application of reverse potentials not exceeding 3 V at temperatures up to 125 °C.

### SURGE VOLTAGE

The surge voltage capability is 115 % of the voltage rating at the relevant temperature.

### TEMPERATURE RANGE

The capacitor is designed for operation between - 55 °C and + 125 °C, with linear voltage derating above + 85 °C to 66 % of the rated voltage at + 125 °C.

### CAPACITANCE TOLERANCE

The standard capacitance tolerance is ± 20 % although special tolerances are available by arrangement.

### INTRODUCTION

The module series of capacitors comprise five individual button units which are connected in parallel to give a very high capacitance.

The epoxy resin encapsulation within an epoxy resin box, measuring approx. 50 mm x 50 mm x 10 mm gives an extremely robust construction which lends itself to bank mounting.

The MC module incorporated CA2 or CE2 style buttons. These button capacitor styles are of all-tantalum construction using a tantalum anode and tantalum cathode with a non-solid electrolyte. This well-proven construction with its highly efficient seal combined with the resin encapsulation gives an extremely robust module of long life and high reliability under military and avionic environments with the capability of withstanding 3 V in reverse, and of handling high levels of ripple current.

### APPLICATIONS

These units are designed for use in general military, space avionics and professional applications. For example: Power supply smoothing, filter network, timer functions.

### WEIGHT

The approximate weight of a module is 130 g.

**APPLICATION INFORMATION**

Capacitors may be operated at less than the rated voltage, resulting in significantly reduced leakage current values.

In timing circuits, or other applications where the device is subjected only to a DC voltage, the ballistic or DC capacitance will be somewhat larger than measured at 50 Hz.

The parametric information must necessarily be brief, although additional comprehensive data is available on request, and the tests tailored to customers' requirements can be made.

**RELIABILITY**

All capacitors are subjected to burn-in. This is to remove infant mortalities and ensure reliability. The capacitor lifetime is enhanced when the unit is subjected to a reduced ripple current, a low ambient temperature, and is externally cooled. The use of a heat sink is recommended.

**STACKING**

The units are suitable for stacking by use of through bolts. It is strongly recommended that a metal heat sink is used between each unit in order to eliminate the possibility of hot spots.

**ESTABLISHED FAILURE RATE**

The MT range incorporates 735D capacitors which are structurally similar to and subjected to the same processes as our 135D and MIL-PRF-39006 range which is to an established failure rate of level R, 0.01 % per 1000 h at a 60 % confidence level. The CECC system of testing does not readily yield data to prove these levels, but in-house testing supports this figure.

Although failure rates derived from life tests are a useful guide, in practice capacitors rarely see conditions of a steady DC voltage and temperature. The construction of the MT module gives an ability to handle the high ripple currents at high frequencies, reverse voltages up to 3 V, and extremes of temperature likely to be encountered in modern circuitry.

**ALTERNATIVE CONSTRUCTION**

Alternative constructions based on the module range with differing terminal configurations and capacitor combinations including series connected units are available.

**ORDERING PROCEDURE**

Example: MC2D (910  $\mu$ F, 75 V<sub>DC</sub>)

Vishay Part Number: MC2D917M075S

MC2	D	917	M	075	S
MODEL	CASE CODE	CAPACITANCE	TOLERANCE	VOLTAGE	TERMINATION AND PACKAGING
	See Standard Ratings table.	This is expressed in picofarads. The first two digits are the significant figures. The third is the number of zeros to follow.	M = 20 % (std) K = 10 % (special order)	This is expressed in volts. To complete the three-digit block, zeros precede the voltage rating. A decimal point is indicated by an "R" (6R3 = 6.3 V).	S = Standard (Ag/Cu)

**DIMENSIONS** in inches [millimeters]

## Notes

- Capacitance tolerance:  
M = 20 % standard  
K = 10 % special order
- Termination type:  
S = Standard

**PERFORMANCE CURVES**

Capacitance/temperature at 50 Hz

Dissipation factor/temperature at 50 Hz

Impedance/temperature at 50 Hz

Leakage current/temperature at maximum voltage

Capacitance/frequency at 25 °C

ESR/frequency at 25 °C

**PERFORMANCE CURVES**

Impedance/frequency at 25 °C

**Note**

- All performance curves are provided from historic Arcotronics module series M/ME datasheet information
